

# KÖSTER Turbo Mortar F

Technical Data Sheet C 516 025

Issued: 2019-09-06

## Fine grained, fast setting repair and re-profiling mortar with very early high strength development

#### **Features**

KÖSTER Turbo Mortar F is a repair, concrete replacement, and reprofiling mortar with an exceptional strength development: the mortar can be mechanically stressed already after 60 minutes. The consistency can be regulated for vertical or horizontal application. A distinguishing feature of KÖSTER Turbo Mortar F is its low shrinkage. With the addition of KÖSTER Turbo additives, the mortar characteristics can be optimized for individual jobsite requirements.

after approx. 30 min. greater than 17 N / mm<sup>2</sup> greater than 20 N / mm<sup>2</sup> greater than 30 N/mm<sup>2</sup> greater than 35 N / mm<sup>2</sup> greater than 40 N / mm<sup>2</sup> approx. 3.0 N / mm<sup>2</sup> approx. 4.0 N/mm<sup>2</sup> less than 0.5 mm/m approx. 1.9 kg/l

greater than 15000 N / mm<sup>2</sup> 0 to 20 mm approx. 15 min.

### **Fields of Application**

KÖSTER Turbo Mortar F is suitable for all interior and exterior concrete repairs. It is especially suited to time-sensitive applications such as:

- Repair of industrial floors during continued operation
- Repair of streets and driveways
- Repair and reprofiling of architectural concrete
- Repair of bridges and infrastructure for fast re-opening

#### **Substrate**

The surface must be sound and solid, free of oil and grease, residual adhesions and cement residue. The material can be applied to all concrete substrates. The pull off strength of the substrate must have a minimum of 1.5 N/mm<sup>2</sup>.

When installing mortars substrate preparation is of vital importance. Pre-wet all mineral substrates before the installation of KÖSTER Turbo Mortar F. The surface near pore structure must be saturated, (avoiding standing water and puddles) so that it does not absorb water from the applied mortar. Salt contaminated substrates are to be primed with approximately 200 g / m<sup>2</sup> of KÖSTER Polysil TG 500.

### Application

Each 25 kg bag of KÖSTER Turbo Mortar F is mixed with 4.0 - 4.5 l of fresh water, which equates to 16-18 M%. Add 3/4 of the water to a sufficiently large mixing vessel. Add the powder component slowly while constantly mixing with a screed or compulsory mixer. Alternatively, KÖSTER Turbo Mortar F can also be mixed with 4.0 - 5.0 I liquid solution of KÖSTER Mortar Boost and water in a ratio of 1: 1.

Mix to a homogenous, lump free consistency. Add the remaining water to achieve the desired consistency. Minimum mixing time is 3 minutes.

# Additional components per 25 kg bag of KÖSTER Turbo Mortar

#### KÖSTER Turbo Retarding Agent 25 g

Addition to the freshly mixed mortar increases the pot life by approx. 20 minutes. Add a maximum of 3 units.

#### KÖSTER Turbo Super Plasticizer 65 a

Mix 4.0 liters of water to a 25 kg bag of KÖSTER Turbo Mortar F. Slowly add the KÖSTER Turbo Super Plasticizer while mixing constantly until a flowable consistency has been reached, minimum 3 minutes mixing time. The plastic material will develop a flow-able consistency. If a more self-leveling consistency is required, up to 0.5 I of water may be added. Process the material immediately after mixing.

For large areas such as early loadable screeds KÖSTER Turbo Binding Agent can be mixed with sand on-site.

#### Aftertreatment

When necessary the freshly set material may be covered in polyethylene sheeting to aid curing.

#### Consumption

Approx. 1.9 kg / I void

#### Cleaning

Clean tools immediately after use with water.

### **Packaging**

C 516 025 25 kg bag

### Storage

Store the material in a dry environment. In originally sealed packages, the material can be stored for a minimum of 6 months.

Use gloves, goggles, mask, and all Personal Protective Equipment required by governmental, state, and local regulations while processing.
